

[Home](#) / [Standard products](#) / [Cellular products](#)

Used as insulation material, insulation, place holders or vibration protection.

Depending on the material and the batch size, we select the suitable manufacturing technique, e.g. stamping, water jet cutting or CNC contour cutting, for the processing of your articles. The products are subsequently bonded, welded, foil-clad or equipped with self-adhesion depending on your requirements. Economic feasibility and the required specifications of the products are what ultimately determine which technique will be used.

We have the following cellular material groups in our range:

- [Foam HH25](#)
- [Foam rubber](#)
- [Sponge rubber](#)

We will be happy to advise you and recommend the suitable material for your application.
