---

Our hose fittings are used in the automotive industry, in mechanical and plant engineering and in various other industrial sectors. The connection of a hose and a fitting into a functioning hose line suitable to the job at hand requires precise knowledge about the purpose and the conditions of the application. In dialogue with our customers, the specifications are defined so that our fittings stand up to the mechanic, thermal and chemical demands they are faced with and so that they ensure that the connection to the hose is strong and form-fitted.

Especially in the field of threaded hose couplings which have push-locks and are used for pressurised hoses for installing air and water, we have a tremendous wealth of experience.

Moreover, you can also obtain the following hose fittings from us – some of which come from our warehouse inventory:

- [Hose nipples](#)
- [Screwed sockets](#)
- [Reduction nipples](#)
- [Sleeves with nut](#)
- [Bulkhead screw connections](#)
- Shell fittings
- Flange fittings
- Hose couplings

We would be happy to help you make your selection.
